Quality coverage: 8.41 in Q20 bases; pulse field gel estimation.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 26 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

It currently consists of 3 contigs. The true order of the pieces is another who won and their order in this sequence record is a rabitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB 2; Length 151349;

                                                                                                                                                                                                                                                                                                 0;
                                            The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SRP1), SRP2), SRP2-like proteins (ZF) and CUL-1 (a member of the cullin/ CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or Bcl-2 polypeptide in a cell SKP2 and SRP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Probe #7617 for gene expression analysis in human cervical cell sample.
their gene products are used as genetic or biochemical markers (e.g. blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polymorleotides, polypeptides and antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia, dysplasia and hyperplasia.
                                                                                                                                                                                                                                                                                                                                            Gaps

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                               Probe #11304 used to measure gene expression in human placenta sample.

The present invention describes a method of screening a test agent for hepatotoxicity. The method comprises: (a) providing a test cell hepatotoxicity. The method comprises: (a) providing a test cell copulation comprising a cell capable of expressing one or more nucleic and sequences selected from the group consisting of RTSKMARKER 1-8 and INJURYMARKER 1-10; (b) contacting the test cell population with a catis sequences in the test cell population; (d) comparing the actis sequences in the test cell population; (d) comparing the expression of the nucleic acid sequence in an reference cell cappulation comprising at least one cell whose exposure status to a population comprising at least one cell whose exposure status to a population nevels of the RISKMARKER or INJURYMARKER sequences, if expression is the RISKMARKER or INJURYMARKER sequences. If expression is the RISKMARKER or INJURYMARKER sequences. If method is useful population and reference cell population.

The method is useful for identifying a hepatotoxic agent. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .;

                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                      The sequences given in AAT7780.81 encode NIP-1 and NIP-2 (NIP = NUMA interfere mitotic apparatus) interacting protein). Compounds which interfere with the interaction of NUMA with a known NIP are used to modulate cell division and/or proliferation. Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NUMA or NIP which may be markers for aberrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). Also where malignancy is related to defects in NUMA or NIP, it can be treated by admin. of the appropriate

The present sequence encodes the E6AP-binding protein cin42. E6AP mediates ubiquitination and so the inactivation of e.g. p53 tumour mediates ubiquitination and so the inactivation of e.g. p53 tumour call because the E6AP-binding protein is likely to be involved in normal cell homeostasis and in the pathogenesis of proliferative and cell homeostasis and in the pathogenesis of proliferation of gene expression or the differentiation disorders, e.g. regulation of gene expression or the coll surface receptors, biogenesis of rivolow by gene therapy, may useful in treatment and prevention of no papelloma virus infected transformed cells and carcinoma, and may also be used to regulate epithelial cell processes more generally, e.g. in be used to require epithelial cell processes more generally, e.g. in cases of psoriasis, acre, icthyosis, aphthous utcers it may also be used to generate antibodies which are used in immunossasys to be used to generate antibodies which are used in immunossasys to be used to generate antibodies which are used in immunossasys to combinant proteins and oligonucleotides useful as probes and primers for diagnostic detection of (mutant) mRNA for the protein in colling protein-encoding qenes, for the detection of mutations in E6AP-binding protein-encoding qenes, contact can be used to mis-expression of these genes or mis-incorporation of the protein in a mis-expression of these genes or mis-incorporation of the protein in a contact can be used to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Human breast and ovarian cancer associated antigen gene SEQ ID 131.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAZ39581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           G X G X
             AAM AAH99166 to AAH99904 encode the human proteins given in AAM25225 to
AAM25963. The proteins can have activities based on the tissues and
cells thys are expressed in, such as: antinframmatory; antirheumatic;
antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
central nervous system; virucide; anti-HIV; fungicide; antimutagen;
cardiovascular; antianaemic; antiagregant; hemostatic; vulnerary;
cardiovascular; antianaemic; antiagregant; natiallergic; antiasthmatic;
antiparkinsonian; and immunostimulant. The proteins and polynucleotides
encoding them can be used in gene therapy, antisense therapy and vaccine
production, The proteins and polynucleotides are useful for screening for
agonists or antagonists of a protein and for the treatment and diagnosis
of disorders associated with the activity of a protein e.g. inflammation,
rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction,
infections, autoimmunity, genetic diseases, heamatopoietic disorders,
anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers,
costeoporosis, severe complained immunodeficiency, eczema, allergic
hinitis, asthma, diabetes, cancer, multiple sclerosis, depression,
controlled and antered multiple sclerosis, depression,

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are esquences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the isolation and characterisation of the DNA and protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, proteins, autoimmune haemolytic aneamia, autoimmune thyroiditis, and allows.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides antisense compounds targeted to a coding region, 3'UTR or 5'UTR of a nucleic acid molecule encoding human CREL (transcriptional activator). The antisense compounds are useful as research agents and diagnostics such as in the elucidation of the function of a particular gene. The antisense compounds can be useful as therepeutic modalities that can be configured to be useful in treatment regimes for treatment of cells, tissues and animals, especially humans. In the prior art, there are no known therapeutic agents which effectively inhibit the synthesis of cREL and additional agents capable of inhibiting cREL function are still required. The present sequence represent the human CREL sequence (GenBank Acon No: X75042).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS: Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation; leukaemia; ss.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, in munosuppressant and cytostatic acitvity. The polymorlectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polymuclectide of system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic collication of the activities such as: Immune system suppression, utilisation of the activities such as: Immune system suppression, and homolytic activity, chemotactic/chemokinetic activity, heamostalic assays for receptor activity, arthritis and inflammation, leukaemias and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; heemostatic; amyotrophic lateral sclerosis; SNy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; druy screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                         Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         qq
The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat disease of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system as peripheral nervous injuries, peripheral nervous system and repressed and central nervous system diseases, such as lateral as peripheral sease, municipation of alsease, such as intilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constructions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   UNC-53; Caenorhabditis elegans; microtubule; neural regeneration; anticancer; anti-neurodegeneration; antifibrotic; anti-adhesive; human; antisclerotic; antimetastatic; anti-arthritic; autoimmune disease; Ss.

The invention provides vertebrate (human) protein homologue of a UNC-53 crop rotein of Caenorhabditis elegans. The UNC-53 binds to microtubules or their plus ends. The UNC-53 sequences are used to promote neutal control of caenoration, revascularization and wound healing; also for treating reqenerative disease, acute traumatic injury, fibrotic disease and neurodegenerative diseases (e.g. rheumatoid arthritis and sclerosis). The autoimmune diseases (e.g. rheumatoid arthritis and sclerosis). The proteins, as a source of probes for detecting allelic variants and proteins, and as source of probes for detecting allelic variants and proteins and as source of therapeutic antisense sequences. Cells the expression; and as source of therapeutic antisense sequences. Cells the expression and as source of therapeutic antisense sequences. Cells that expression are used to identify regulators of cell shape, express the protein are used to identify regulators of cell shape, concerns that are involved in signal transduction pathways also involving the compounds that alter attechment of UNC-53 to used to deliver the target gene coupled to a UNC-53 encoding sequence may be concerned by the present sequence represents the nucleotide sequence of a 4984 consorted from RAC 585E09 (contains a putative 5' exon sequence of a 4984 consorted to a UNC-53/1) extending the sequence derived from cDNA libraries shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention provides vertebrate (human) protein homoloque of a UNC-53 protein of Caenorhabditis elegans. The UNC-53 binds to microtubules or their plus ends. The UNC-53 sequences are used to promote neural regeneration, revascularization and wound healing; also for treating neurodegenerative disease, acute traumatic injury, fibrotic disease and autorimente diseases (e.g. rheumatoid arthritis and sclerosis). The UNC-53 polynucleotides can be used for recombinant production of the proteins, as a source of probes for detecting allelic variants and polymorphisms, for sequencing genomic DNa and for detecting UNC-53 expression; and as source of therapeutic antisense sequences. Cells that express the protein are used to identify regulators of cell shape, growth, motility and migration. They can also be used to identify proteins that are involved in signal transduction pathways also involving UNC-53, and to identify compounds that alter attachment of UNC-53 to microtubules. Carget gene coupled to a UNC-53 encoding sequence may be used to deliver the target gene to a cellular microtubule or its plus ends. The present the uncertain are sequence of the first human homologue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

AAT A280-T14320 represent RNA ligands for immunoglobulin E (19E). These sequences are non-naturally occurring RNA ligands, and were isolated and sequences are non-naturally occurring RNA ligands, and were isolated and sequences of purified using the method of the invention. In this method, a candidate mixture of nucleic acids is prepared, and contacted with IgE. The mixture are sequences with an increased affinity to 19E relative to the mixture are partitioned off from the rest of the mixture. The partitioned sequences are then amplified, to yield a mixture of nucleic acids enriched for those with relatively higher affinity and specificity for 1gE binding. The method can be repeated in order to obtain a mixture of higher specificity for 1gE binding. This method can be carried out with higher specificity for 1gE binding. This method can be carried out with higher specification for the 19E ligands inhibit the function of 1gE by preventing the 19E/receptor interaction. The 1igands are therefore useful in diagnostic and therapeutic applications for diseases associated with 1gE dependent reactions. The 19E dependent reactions include allergic diseases such as allergic rhinitis (hay fever), asthma, and anaphylactic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ó

8 days after inoculation with Colletotrichum trifolii"
/lab_host="E. coli strain XLOLR"
/note="Vector: pBluescript SK-: Site_1: EcoRI; Site_2:
Xhoi; cNNA was prepared from polyA+ enriched RNA from
cotyledons and primary leaves harvested 5 and 8 days after
inoculation with Colletotrichum trifolii. The cDNA was
directionally 1 ligated into the Uni-ZAP RN vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-ZAP phage using Ex-Assist
helper phage and propagated in XLOLR cells. Note: EST may
be of fungal origin."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              - Web: www.genoscope.cns.fr)

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buifalo.

NY. The library is named RPCT-98 and was constructed by partial EcoRI digestion of Prosophila DNA provided by the BDGP from the isogenic strain y2: cn bw sp, the same strain used for the BDGP from and how to order Individual BAC clones, the entire library and how to order Individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://dacation from the BACPAC Resource Center can be
